Healthcare For Injured Workers

Advantage Healthcare Systems

We specialize both in the physical and psychological effects of injured patients. While most treatment focus just on medication or physical therapy, our comprehensive approach involves highly trained specialists including:

Treatment May Include:

- Physical & Occupational Therapy
- Speech & Language Therapy
- Cognitive Rehabilitation
- Behavioral & Psychological Therapy
- Vocational Rehabilitation
- Individual Counseling & Biofeedback
- Coping Skills Training
- Job Simulation
- Pain Management Injections
- NCV/EMG/NCS Testing
- Ambulatory Electroencephalography (EEG)
- Physical Rehabilitation
- Heat/Ice Therapy
- Massage Therapy
- Ultrasound
- Electrical Muscle Stimulation
- Chiropractic Manipulation

Founded in 1982, we continue to strive to serve the community and the needs of the injured. Family owned and operated is how it started, and is how we continue to change with the the needs of the industry.

Being accredited by CARF means we will continue to strive to be better. At AdvantageHCS, we want to hear from you, your support group, and all stakeholders. This is how we make the future, together.

Chronic Pain Management & Functional Restoration Program

Our Chronic Pain Management (CPM) Program approach to pain and disability reflects the belief that everyday stress and mood can contribute to physical pain. Unrelenting pain may become a stressor in and of itself. Our program is designed to help the individual take control of his/her well being, in order to break out of the pain cycle. These treatment protocols have proven to show an increase in function and decrease on the dependancy of healthcare.

Functional Restoration Program (FRP) is an inter-disciplinary, individualized, job specific program with the primary goal of returning to work. FRP also uses real or simulated work tasks, progressively graded conditioning exercises, pain management coaching techniques, and medication management that is based on the individual's needs and measured tolerances.

Outpatient Medical Rehab Program

Outpatient Medical Rehab Program (OMRP) is individualized, with the goal of increasing the overall function of the patient. The treatment team is picked after the patient completes a multidisciplinary evaluation, where the deficits are addressed and goals are set with the patient and team. OMRP is usually structured 3-5 days a week, between 2 and 6 hours a day. Most programs are 2-6 weeks in length.
